Rain-Water.....What are you really drinking?

While the rain has come just in time for many farmers, people in the cities are also pleased that their rain-water tanks are filling up, but *have you considered what you are really drinking?*

A joint Melbourne Monash University and CSIRO study found the use of lead in roofs, (to join surfaces and channel away water,) elevated the lead content in the tank water as high as 50 times Australia's drinking water guidelines. But even across a broader range of roof types and tanks, one third of those surveyed contained lead concentrations in the water exceeding the safe limit by up to 35 times. "Concentrations of aluminum, cadmium, iron and zinc were also found at levels exceeding acceptable health levels," the study reports.

Australians have increasingly embraced rainwater tanks, pushing the share of homes with water tanks to nearly 20 per cent. Of the remaining homes, according to recent data from the Aust. Bureau of Statistics, 60 per cent are considering installing rain water tanks. However, unless you test the tank water you cannot be sure of what contaminants are in it.

That is where water from Rowater Australia has the market advantage. Rowater is a HACCP and Quality Endorsed Company with TQCSI Accreditation, so you know that what you are purchasing is guaranteed and of superior quality.

The reverse osmosis process removes heavy metals, pesti-

cides, organic and inorganic materials through a physical barrier. This process is by far the most advanced water purification technology available and this pure water is available to you with just one call to our office on 8371 4588 or email us at info@rowater.com.au.

Excerpts for this article were gathered from 'The Australian', 14/04/08.

The humble water tank may contain lead levels as high as 50 times the Australian drinking water guidelines.

Agricultural Fair held at Broken Hill

The Managing Director of Rowater Australia, Mr Chee Fong, and Operations Manager John Papa have just spent the weekend at the Broken Hill AgFair in the Rowater display tent. The fair, held every two years in May, helped inform the locals of new

technology in desalination which may be able to assist them in the long term sustainability of their farms and businesses. Over 8000 people attended the fair.

'Rowater Australia providing customised water solutions for you needs.'

Aquanova – Oxygen enriched organically pure drinking water

Aquanova is a pure refreshing tasting water, that is double membrane reverse osmosis purified water with added oxygen in it.

Increasing oxygen in the body has been shown to help in the reduction of recovery time for athletes. It is also great for detoxifying and recovery after an illness.

When we are tired and yawn, it is to get more oxygen in the brain to combat fatigue and help the brain function better. With increased pollution and

'The only additive is oxygen'.

our sedentary lifestyles, we don't get the blood pumping around our bodies enough and

thus do not circulate the oxygen around.

Available in economic 15 litre bottles, Rowater offers free delivery in most metropolitan areas and stocks a full range of poly and ceramic wells for water dispensing.

Call the office to place your order on 8371 4588.

Enjoy good health and good water, drink Aquanova from Rowater Australia, a TQCSI and HACCP Accredited Company.

Anyone for a cup of tea or coffee?

Winter is a great time for hearty soups and warm drinks. Why not improve the flavour of your dishes by using Aquanova or Purelle drinking water whenever you need water to cook with or whenever you fill the kettle. Apart from no residue building up in the kettle or jug, you'll notice the great taste and flavour of the food enhanced. The true flavour of hot drinks comes out when there is no taste of salt in the water and no smell of chlorine. Your appliances will last longer and your food and drink will taste better. Don't forget to use it when making stocks, filling ice cube trays or whenever you need pure great tasting water.

Rowater Australia is a wholly South Australian owned company with over 20 years experience in the water industry. A founding member of the Water Industry Alliance and now with TQCSI and HACCP Accreditation, we are proud of our manufacturing capabilities and market leaders in providing customised water solutions for all your needs.

Time to clean your well

It's time again to remind you to clean your well or dispensing tap. We recommend you do this at least each quarter, but monthly would be preferred.

Wash your well or dispensing tap in warm soapy water or with a solution such as Milton Sanatising Solution to destroy any bacteria. Rinse thoroughly in tap water then rinse in Rowater.

A monthly clean will keep your water tasting its best.
